DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 17, drawn to a variant polypeptide, phenol-oxidizing enzyme, classified in class 435, subclass 189/190.
- II. Claims 12-16, 18-21, drawn to polynucleotides, vectors, host cells and a method of making variant polypeptide using the polynucleotide, classified in class 435, subclass 69.1.
- III. Claims 22-24, drawn to a method for producing a host cell, classified in class 435, subclass 252.3.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are patentably distinct from each other. The polypeptide of group I, the polynucleotide of group II, each comprise amino acid sequences and nucleotide sequences which are chemically unrelated, do not require each other for practice; have separate utilities, such as use of the group I polypeptide to catalyze a phenol oxidation reaction versus the use of polynucleotide in a hybridization reaction and are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search.

Inventions I and III are patentably distinct from each other. The polypeptide of group I is neither made nor used in the method of group III. The inventions have separate utilities such as the polypeptide of group I in a phenol oxidation reaction versus the method of group III use to

make recombinant host cells. They are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search.

Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polynucleotide can be used as a probe as opposed to its use in the making of a recombinant host cell.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
